The scatter plot displays the daily volume of tweets for the #BlackLivesMatter hashtag. The vertical axis (y-axis) is scaled from 0 to 100,000 in increments of 20,000. The horizontal axis (x-axis) spans from June to November 2020, with major grid lines and labels for July and October. The data points are represented by black dots. For the majority of the period, the tweet volume remains very low, with points clustered along the bottom of the chart. A notable exception is a sharp increase in late October/early November, where a single data point reaches approximately 95,000 tweets.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with low case counts from May through July. A significant upward trend begins in August, leading to a major peak in late October. Following this peak, there is a rapid decline in case counts through November, with a slight uptick in late November.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 1,000,000 in increments of 200,000. The x-axis shows the months from June to November. The data shows a major peak in early July, followed by a period of relative stability with minor fluctuations. A second, even higher peak occurs in early November, reaching nearly 1,000,000 cases, before a sharp decline is visible at the end of the period shown.
